1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hornbostel (2,557,348, cited by applicant). The claimed design making assembly reads on the device of Hornbostel as noted below. The claimed housing reads on motor casing 14 and the claimed axle reads on shaft 18 including spindle portion 23 that can be integral with the shaft (note column 3 first full paragraph). The claimed platform reads on support member 21 and the claimed panel reads on disk 24.

Thus the device of Hornbostel has all of the elements of the claims but for an express teaching of an actuator to turn the motor on and off. On the other hand such a device is conventional in the relevant art. Accordingly it would have been obvious to provide the device of Hornbostel with an actuator to turn the motor on and off in order to make use of the device more convenient.

3. Claim 3 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. Claim 4 is allowed.
